

# 4-loop bags

The 4-loop bag is a cost effective bulk-handling solution suitable for companies handling big bulk volumes and mostly high value products. The 4-loop bag is also a good solution when there are limitations in the lifting height.

The 4-loop bag is mostly used for chemicals, metal-powders, foodstuff, animal feed, medical products, minerals, etc.

Tailor made 4-loop bags, according to the customers demand, with a number of different designs i.e. filling- and discharge-spout, tray-base, form stability, conductive bag, multi-trip, UN-approved for Hazardous Goods, cross corner loops, etc.

4-loop bag (circular woven fabric)

Q-bag with pallet base

Form stabile 4-loop bag (called Q-bag or Baffle bag)

Mesh bag, can be used for i.e. vegetables

4-loop bag (flat woven fabric)
